**-- The MAILING DATE of this communication appears on the cover sheet with the correspondence address --**

**Period for Reply**

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
- If the period for reply specified above is less than thirty (30) days, a reply within the statutory minimum of thirty (30) days will be considered timely.
- If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133). Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

## **DETAILED ACTION**

### ***Response to Amendments***

1. The reply filed 10/13/04 consists of amendments to Claims 1-20 to correct typographical errors and remarks related to rejection of claims. The claims are not allowable as explained below.

### ***Claim Rejections - 35 USC § 102***

2. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

3. Claims 1-20 are rejected under 35 U.S.C. 102(b) as being anticipated by Luther et al. (5867621).

Luther (Figures 1-6) shows a multifiber ferrule 38 with a molded ferrule body having a smaller end face 48 with a plurality of bores 52 for receiving ends of optical fibers, at least one opening 50a for receiving alignment members and defining a longitudinal axis wherein the ferrule body comprises an integrally formed geometrical reference feature (a sloped planar surface) between the smaller end face 48 and a larger end face 48 and wherein the end face is not machined. The surface of the smaller end face 48 is perpendicular to the axis and the sloped surface is at angle to the axis. The sloped surface provides visual measurements for aligning purposes. The sloped surface forms a bumper extending from the end face 48 of the ferrule. The ferrule body does have a recessed feature formed by body elements 34 and end face

Art Unit: 2839

44. The geometrical reference feature is within an opening in the body and is not altered through the useful life of the ferrule. The planes defined by the end face 48 and sloped surface define an angle.

### ***Conclusion***

4. **THIS ACTION IS MADE FINAL.** Applicant is reminded of the extension of time policy as set forth in 37 CFR 1.136(a).

A shortened statutory period for reply to this final action is set to expire THREE MONTHS from the mailing date of this action. In the event a first reply is filed within TWO MONTHS of the mailing date of this final action and the advisory action is not mailed until after the end of the THREE-MONTH shortened statutory period, then the shortened statutory period will expire on the date the advisory action is mailed, and any extension fee pursuant to 37 CFR 1.136(a) will be calculated from the mailing date of the advisory action. In no event, however, will the statutory period for reply expire later than SIX MONTHS from the mailing date of this final action.

### ***Response to Arguments***

5. Applicant's arguments filed 10/13/04 have been fully considered but they are not persuasive. The applicant agrees that Luther does not disclose the end face to be machined subsequent to molding (see remarks Page 9, lines 13-15). Determination of angularity of an end face defined by geometrical feature and visual observation is common knowledge.
